GATE 2020 Results

1. PALLAVI RAJKUMAR KALE – Mechanical Engineering - Score_35.57

Qualifying in GATE 2020 does not guarantee either an admission to a post-graduate programme or a scholarship/assistantship. Admitting institutes may conduct further tests or interviews for final selection.

In the GATE 2020, the qualifying marks for a general category candidate in each paper is $\mu + \sigma$ or 25 marks (out of 100), whichever is greater, where μ is the mean and σ is the standard deviation of marks of all the candidates who appeared in the paper. The qualifying marks for OBC(NCL) and SC/ST/PwD candidates are 90% and two-third of a general category candidate in the paper respectively.

The GATE 2020 score was calculated using the formula

GATE Score =
$$S_q + (S_t - S_q) \frac{(M - M_q)}{(\overline{M}_t - M_q)}$$

where

M is marks (out of 100) obtained by the candidate in the paper

 \mathbf{M}_{q} is the qualifying marks for general category candidate in the paper

 \overline{M}_{t} is the mean of marks of top 0.1% or top 10 (whichever is greater) of the candidates who appeared in the paper (in case of multi-session papers including all sessions)

 $S_q = 350$, is the score assigned to M_q

 $S_t = 900$, is the score assigned to \overline{M}_t

In multi-session (Civil Engineering and Mechanical Engineering) papers, the normalized mark of f^{th} candidate in the i^{th} session \hat{M}_{ij} was computed using the formula

$$\widehat{M}_{ij} = \frac{\overline{M}_t^g - M_q^g}{\overline{M}_{ti} - M_{ia}} (M_{ij} - M_{iq}) + M_q^g$$

where

 M_{ij} is the actual marks obtained by the j^{th} candidate in i^{th} session

 $\bar{M}_t^{\bar{g}}$ is the average marks of the top 0.1% of the candidates considering all sessions

 M_q^g is the sum of mean and standard deviation marks of the candidates in the paper considering all sessions

 \overline{M}_{tt} is the average marks of the top 0.1% of the candidates in the i^{th} session

 $\mathbf{\textit{M}}_{iq}$ is the sum of the mean marks and standard deviation of the i^{th} session

Graduate Aptitude Test in Engineering (GATE) 2020 was organised by Indian Institute of Technology Delhi on behalf of the National Score ination Home (CCP) HOATE for the Department of Higher Education, Ministry of Human Resources Development (MHRD), Gerinment of India.

Abstract—Use of miniaturized antenna for advance wireless communication is trending since last couple of decades. Wearable applications, such as smart watches are using WiFi (Wireless Fidelity). Bluetooth, or BLE (Bluetooth Low Energy) as the way of communication technology. These communication technologies are operating at a commonly used ISM frequency band, 2.4GHz. This frequency band is unlicensed and free to use. In this article, designed MIMO antenna can be used at 2.37GHz, 3.94GHz and 5.96GHz frequencies. This antenna is designed and fabricated by using multiple slots on single patch, separated by calculated distances. Improvement in VSWR, Directivity and Gain can be achieved by using microstrip patch antenna. Return loss of Designed MIMO is below-40dB and VSWR is in between 1 to 2 at 2.37GHz, 3.94GHz and 5.96GHz.

I. INTRODUCTION

Microstrip Patch antennas have several advantages over conventional antenna and therefore are used in a variety of If the impedance of the antenna, the transmission line and the circuitry do not match with each other, then the power will not be radiated effectively. Instead, some of the power is reflected back in the form of reflected/standing waves. The term, which indicates the impedance mismatch, is VSWR. VSWR stands for Voltage Standing Wave Ratio. It is also called as SWR. The higher the impedance mismatch, the higher will be the value of VSWR.

The proposed antenna consists of four ports with all the four patches operates at LTE and WLAN frequencies 1.8GHz, 2.8GHz, 3.3 GHz. The antenna is fabricated on an inexpensive FR4 material of a dielectric constant of £ = 4.4, with thickness of substrate that is 1.6 mm and the thickness of patch is 0.035 mm.

(57) Abstract

This design of multiband MIMO (Multiple Input Multiple Output) Antenna can be fabricated to obtain novel results in terms of reflection coefficient, VSWR (Voltage Standing Wave Ratio), Directivity and Gain. Use of MIMO (Multiple input multiple output) for advance wireless communication is trending since last couple of decades. Multiband systems, such as WiFi (Wireless Fidelity), Bluetooth, or BLE (Bluetooth Low Energy) are referred as the way of advanced communication technology. These communication technologies are operating at a commonly used ISM frequency band, 2.4GHz. This frequency band is unlicensed and free to use. This design of MIMO antenna can be used at 1.8GHz, 2.4GHz and 3.3GHz frequencies. This MIMO antenna is designed by using multiple patches on single ground plane, separated by Isolator. Improvement in VSWR, Directivity and Gain can be achieved by using microstrip patch antenna. Return loss of Designed MIMO is below -10dB and VSWR is in between 1 to 2. Isolator is used to reduce mutual coupling between the patches of MIMO antenna.

Name of The Product Distance meter: Name of The Faculty: Mr. A.A. Jadhav

Objective:

To alert to maintain a 2-meter distance from any person.

Working:

Reasonably, the most reliable approach to slowing down the spread of the coronavirus is to keep away from others; prevention is better than cure.

This novel circuit alerts if person comes too close to someone. Ultrasonic distance sensors connected to Arduino Uno senses the minimum safe distance and alert you through a buzzer.

Outcome: This Product alerts if person comes close to you. Thus it helps to keep away people and prevent spread of Coronavirus.

Abstract— In today's era most of the people prefer dinner in the restaurant. The use of robots as waiters in restaurants is an increasing trend in the service industry. The Waiter-robot is an exceptional autonomous robot which has the ability to follow a designated path by measuring the distance and reach its intended destination. It reducing effort, time, error, etc and increasing quality, capacity and efficiency in the delivering the food. This robotic application using a Raspberry-pi based kit mounted with ultrasonic sensors for mapping and localization of destination table.

Keywords: Raspberry-pi, Ultrasonic sensors, DC motors, push button, LCD etc.

I. INTRODUCTION

The use of robots as waiter Robot in restaurants is on a currently increasing trend in the service industry. It is a robot used to help restaurant staffs to deliver order to particular tables in the restaurant. Our robot is able to get instructions from a controller and calculate its path to the destination and navigate its way there. The controller is connected to the display that will show the table that is currently being served. Robot can get directions from Processor and figure its way to the goal and explore its defeat. The Processor is associated

Fig.1 shows the constructional or working model of Robot. Advantages:

- · Reducing effort, time and error.
- · Increases quality of service and efficiency.
- Robots are much cheaper than humans and their cost is now decreasing.
- Robots are more precise and consistent than human workers.
- Increases productivity.

Abstract

The growing demand of customers requires reduced size, low profile, multiband and conformal antenna for wireless communication. In this paper, I have presented the Sierpinski fractal antenna array techniques at a different level of iteration. The proposed antenna resonates at multiple operating frequencies, to give broader bandwidth. The simulation of the antenna was done using CAD FEKO software and tested using VNA. The presentation of different level of iterations of antenna shape has been studied in terms of parameters like Bandwidth, Return Loss, VSWR and Radiation Pattern. Compared simulated and the experimental results which are good in agreement. The proposed antenna is suitable for the bandwidth enhancement like 100MHz, 1220MHz, and 2450MHz respectively at resonant frequencies 2.05GHz, 3.68GHz, and 7.85GHz. Designed antenna is suitable for FM radio broadcasting, GPS system, RFID, and fixed microware applications.

(57) Abstract:

This design of multiband MIMO (Multiple Input Multiple Output) Antenna can be fabricated to obtain novel results in terms of reflection coefficient, VSWR (Voltage Standing Wave Ratio), Directivity and Gain. Use of MIMO (Multiple input multiple output) for advance wireless communication is trending since last couple of decades. Multiband systems, such as WiFi (Wireless Fidelity), Bluetooth, or BLE (Bluetooth Low Energy) are referred as the way of advanced communication technology. These communication technologies are operating at a commonly used ISM frequency band, 2.4GHz. This frequency band is unlicensed and free to use. This design of MIMO antenna is designed by using multiple patches on single ground plane, separated by Isolator. Improvement in VSWR, Directivity and Gain can be achieved by using microstrip patch antenna. Return loss of Designed MIMO is below -10dB and VSWR is in between 1 to 2. Isolator is used to reduce mutual coupling between the patches of MIMO antenna.

(57) Abstract

Wireless body area networks have attracted more and more attention in the recent decade. The concept has wide applications in the fields of emergency rescue, health monitoring, medical care, and physical training. As a critical component in the wearable system, the wearable Microstrip textile antenna plays a key role for the wireless communication between the on body sensors and other devices on-/off body. Due to the influence of the human body and the different characteristics of the materials used, the design flowchart of a wearable antenna is quite different compared to normal antennas. The conventional antenna may not perform efficiently on the human body due to its size & shape. It should be able to maintain flexibility, exhibit minimal degradation in terms of radiation, bandwidth, and reflection coefficient and efficiency performance. So to overcome above problem the miniaturized microstrip textile antenna is designed & simulated with resonant frequencies operates at 1.9642GHz & 2.45GHz. The Microstrip textile antenna is designed with jeans as dielectric material with r=1.7 & square patch dimension of W x L = 52.69mm x 52.69mm. The Microstrip wearable textile antennas provides reflection coefficient of -19.19dB at 1.964GHz & -28.41 at 2.45GHz. By using this textile antenna SAR (specific absorption rate) can be reduced.

(57) Abstract:

Disclosed are a system (100) and method to classify the mental tasks. The system includes an Electroencephalography (EEG) machine (108), processors (202), and memory (206). The EEG machine (108) captures EEG signal data from the brain of a user and data sources. The memory (206) includes a discrete wavelet transform (DWF) module (210) and a classification module (212) the DWT module (210) decomposes the EEG signal data into a plurality of frequency sub-hands and extincts a set of statistical features from the plurality of frequency sub-bands representing a distribution of wavelet coefficients to reduce the dimension of the electroencephalogram (EEG) signal data. The DWT module (210) obtains feature vectors from the set of statistical features. The classification module (212) classifies the mental tasks by applying the feature vectors to a machine learning model. The most illustrative drawing FIG. 2.

Anjali M. Yelasange, Husain K. Bhaldar, Kirti A. More, Anjali P. Katkar

Abstract—In today's era most of the people prefer dinner in the restaurant. The use of robots as waiters in restaurants is an increasing trend in the service industry. The Waiter-robot is an exceptional autonomous robot which has the ability to follow a designated path by measuring the distance and reach its intended destination. It reducing effort, time, error, etc and increasing quality, capacity and efficiency in the delivering the food. This robotic application using a Raspberry-pi based kit mounted with ultrusonic sensors for mapping and localization of destination table.

Keywords: Raspberry-pi, Ultrasonic sensors, DC motors, push button, LCD etc.

I. INTRODUCTION

The use of robots as waiter Robot in restaurants is on a currently increasing trend in the service industry. It is a robot used to help restaurant staffs to deliver order to particular tables in the restaurant. Our robot is able to get instructions from a controller and calculate its path to the destination and navigate its way there. The controller is connected to the display that will show the table that is currently being served. Robot can get directions from Processor and figure its way to the goal and explore its defeat. The Processor is associated

Fig.1 shows the constructional or working model of Robot. Advantages:

- · Reducing effort, time and error.
- · Increases quality of service and efficiency.
- Robots are much cheaper than humans and their cost is now decreasing.
- Robots are more precise and consistent than human workers.
- Increases productivity.

Abstract

The growing demand of customers requires reduced size, low profile, multiband and conformal antenna for wireless communication. In this paper, I have presented the Sierpinski fractal antenna array techniques at a different level of iteration. The proposed antenna resonates at multiple operating frequencies, to give broader bandwidth. The simulation of the antenna was done using CAD FEKO software and tested using VNA. The presentation of different level of iterations of antenna shape has been studied in terms of parameters like Bandwidth, Return Loss, VSWR and Radiation Pattern. Compared simulated and the experimental results which are good in agreement. The proposed antenna is suitable for the bandwidth enhancement like 100MHz, 1220MHz, and 2450MHz respectively at resonant frequencies 2.05GHz, 3.68GHz, and 7.85GHz. Designed antenna is suitable for FM radio broadcasting, GPS system, RFID, and fixed microware applications.

(57) Abstract:

This design of multiband MIMO (Multiple Input Multiple Output) Antenna can be fabricated to obtain novel results in terms of reflection coefficient, VSWR (Voltage Standing Wave Ratio), Directivity and Gain. Use of MIMO (Multiple input multiple output) for advance wireless communication is trending since last couple of decades. Multiband systems, such as WiFi (Wireless Fidelity), Bluetooth, or BLE (Bluetooth Low Energy) are referred as the way of advanced communication technology. These communication technologies are operating at a commonly used ISM frequency band, 2.4GHz. This frequency band is unlicensed and free to use. This design of MIMO antenna is designed by using multiple patches on single ground plane, separated by Isolator. Improvement in VSWR, Directivity and Gain can be achieved by using microstrip patch antenna. Return loss of Designed MIMO is below -10dB and VSWR is in between 1 to 2. Isolator is used to reduce mutual coupling between the patches of MIMO antenna.

(57) Abstract

Wireless body area networks have attracted more and more attention in the recent decade. The concept has wide applications in the fields of emergency rescue, health monitoring, medical care, and physical training. As a critical component in the wearable system, the wearable Microstrip textile antenna plays a key role for the wireless communication between the on body sensors and other devices on-/off body. Due to the influence of the human body and the different characteristics of the materials used, the design flowchart of a wearable antenna is quite different compared to normal antennas. The conventional antenna may not perform efficiently on the human body due to its size & shape. It should be able to maintain flexibility, exhibit minimal degradation in terms of radiation, bandwidth, and reflection coefficient and efficiency performance. So to overcome above problem the miniaturized microstrip textile antenna is designed & simulated with resonant frequencies operates at 1.9642GHz & 2.45GHz. The Microstrip textile antenna is designed with jeans as dielectric material with r=1.7 & square patch dimension of W x L = 52.69mm x 52.69mm. The Microstrip wearable textile antennas provides reflection coefficient of -19.19dB at 1.964GHz & -28.41 at 2.45GHz. By using this textile antenna SAR (specific absorption rate) can be reduced.

(57) Abstract:

Disclosed are a system (100) and method to classify the mental tasks. The system includes an Electroencephalography (EEG) machine (108), processors (202), and memory (206). The EEG machine (108) captures EEG signal data from the brain of a user and data sources. The memory (206) includes a discrete wavelet transform (DWF) module (210) and a classification module (212) the DWT module (210) decomposes the EEG signal data into a plurality of frequency sub-hands and extincts a set of statistical features from the plurality of frequency sub-bands representing a distribution of wavelet coefficients to reduce the dimension of the electroencephalogram (EEG) signal data. The DWT module (210) obtains feature vectors from the set of statistical features. The classification module (212) classifies the mental tasks by applying the feature vectors to a machine learning model. The most illustrative drawing FIG. 2.

Dear Digvijay Ronge,

Congratulations! Your submission to ASHRAE's Undergraduate Program Equipment Grant titled, "Performance study of solar powered cold room system (SPCR) using phase change materials" was approved for funding in the amount of \$3000 to SVERI's College of Engineering Pandharpur.

Before we can process your request, we require you to review the attached Award Information Sheet, which you submitted with your application. Please indicate whether the information is still current and the grant funds are still required. Also, please complete the attached Award Information Sheet and return it with any corrections to your application by **April 30, 2021**.

The Student Activities Chair of the ASHRAE Chapter in your area is copied on this email and he/she should contact you directly for a certificate/award presentation. **However, this will not be a presentation of funds since your check will be mailed in July directly to the individual you indicate on the Award Information Sheet**. If you have any questions, please contact Katie Thomson, Assistant Manager, Student Activities, at 678-539-1212 or by e-mail at kthomson@ashrae.org.

As a reminder, the students involved in the project receiving the grant funds must submit a written report to ASHRAE upon the project's completion. A project spanning more than one semester/quarter must submit a progress report at the end of each semester/quarter. Delinquent reports will disqualify you from obtaining grants in the future; therefore, if your report is going to be submitted late, please contact the Assistant Manager, Student Activities. Details on the interim and final report format are listed on the Student Zone website in the Grants section.

Again, congratulations! We look forward to an opportunity to work with you and your students.

"OLYMPUS 2K18", was organized with an agenda to discover the best ideas and innovations from across the nation that would reform and revolutionize the present day scenario in India. One single idea has the potential to become the harbinger of change and a crusader for a cause in the coming days. Every year, Shri Vithal Education and Research Institute's, Pandharpur (SVERI) invites young engineers from all over the nation to participate in one of the most exciting events of the year "OLYMPUS 2K18". This event aims at providing students, a national platform for exposure to various technical & competitive issues & helping them to enhance their overall skill.

The program started with inauguration ceremony in the auspicious hands of Chief Guest, Hon. Shri. Sanjay Kulkurni, CFO, Fleetgaurd Filters Pvt. Ltd. and Dr. B. P. As a engineering or any other graduate it's our social resoponsibility to contribute towards environment. SVERI always take lead in such activities and this year it was no different. We had celebrated environmental day by planting trees on 21 july 2018 and take oath of preseraction of trees and enviroment. The initiative refered as "Sverich Zaad"

Pandharpur in known as "Dakshin Kashi" of India where every year over 8 lacs pilgrims devotedly visits during "Ashadhi Wari". This floating population is way beyond the population of pandharpur and hence the resource management is always a key factor every year. The use of mobile toilets and cleanlyness is always an issue during wari and hence The faculty members along with group of students participated in nirmalwariabhiyan for 24 hrs in four batches of 6hrs each. The faculty members and students volunteerly encouraged the pilgrims to use mobile toilets and create awareness about plastic ban.
